

SS DuraGloss™

Lithium Topcoat

PRODUCT DESCRIPTION

THE LITHIUM DIFFERENCE™

SS DuraGloss™ is a polishable, high-gloss material that provides superior resistance to stains, water, oil, dusting, and abrasion. This lithium-based product has a deep, rich sheen that enhances the natural look of concrete and intensifies the color of an acid-stained or integrally-pigmented floor. DuraGloss™ outlasts any other product of its kind—which combined with its aesthetic value makes it an excellent treatment for both industrial and retail applications.

The innovative technology of SS DuraGloss™ eliminates the need to apply an acrylic sealer or wax to achieve gloss and stain resistance--dramatically reducing maintenance costs and facility downtime. When applied to surfaces that have been treated with SS Harden X™ as recommended, performance of the DuraGloss™ system is unmatched in the industry.
