

SS DuraGloss 50+™

Penetrating Lithium Industrial Seal Coat

PRODUCT DESCRIPTION

SS DuraGloss™ is a polishable, high-gloss material that provides superior resistance to stains, water, oil, dusting, and abrasion. This lithium-based product has a deep, rich sheen that enhances the natural look of concrete and intensifies the color of an acid-stained or integrally-pigmented floor. DuraGloss™ outlasts any other product of its kind—which combined with its aesthetic value makes it an excellent treatment for both industrial and retail applications.

The innovative technology of SS DuraGloss™ eliminates the need to apply an acrylic sealer or wax to achieve gloss and stain resistance—dramatically reducing maintenance costs and facility downtime. When applied to surfaces that have been treated with SS Harden X™ as recommended, performance of the DuraGloss™ system is unmatched in the industry.

SS DuraGloss™ FEATURES

- Polishable
- High Gloss
- Durable
- Odorless
- Dramatically reduces downtime and maintenance costs
- Increases resistance to stains, water, oil, dusting, and abrasion
- Exceeds OSHA and ADA COF
