

KromaPolish™ System

Deep Penetrating Lithium Polishable Color System

INTERIOR USE ONLY

KromaPolish™ is a polishable concrete-coloring material that provides the benefits of a penetrating hardener/densifier in addition to superior resistance to abrasion and dusting. When sealed with **Harden X™** and finished with **DuraGloss™** as recommended, the **KromaPolish™** system creates a durable, light-reflective surface that is easy to clean and maintain—dramatically reducing maintenance costs and downtime. The unique design and revolutionary protection of the **KromaPolish™** system outlasts any product of its kind in the industry. **KromaPolish™** is designed for interior use and is available in twelve standard, in-stock colors.*

EXPERIENCE THE
LITHIUM DIFFERENCE™

ADVANTAGES OF LITHIUM TECHNOLOGY

Chemical reactions of lithium silicates are more stable than those caused by volatile conventional silicates, allowing the material to penetrate more deeply and react more evenly throughout the concrete for maximum hardening, sealing, and densification. Other silicates absorb moisture and cause ASR, weakening the substrate over time. Lithium silicates are insoluble, providing maximum strength and water resistance. The cutting-edge technology in our proprietary lithium formulations make SealSource® products the most advanced in the industry.

KromaPolish™ FEATURES

- Polishable
- Deep Penetration
- Light-Reflective
- Increases resistance to stains, abrasion, and dusting
- Vibrant Colors - may be blended for a mottling effect
- Fast-Drying
- Durable - reduces maintenance costs and downtime
- LEED® Certified for EQ Credit 4.1: Low-Emitting Material/ Adhesives & Sealants

*Please understand that these colors are the closest representation possible, however color may vary depending on the condition of the concrete being treated. Custom colors are available upon request.
