

# KromaKrete™ System

## UV Stable Lithium Colored Hardener

INTERIOR / EXTERIOR APPLICATION

**KromaKrete™** is a non-polishable concrete-coloring system that provides superior stain resistance in addition to the benefits of a penetrating hardener/densifier. The material penetrates the surface to bond to the substrate, protecting against abrasion and dusting. When used with **DuraGloss™** as recommended, the **KromaKrete™** system creates a durable, UV-stable surface that is easy to clean and maintain—dramatically reducing maintenance costs and downtime. The unmatched protection of the **KromaKrete™** system outlasts any product of its kind in the industry. **KromaKrete™** is available in thirteen standard, in-stock colors.\*

EXPERIENCE THE  
LITHIUM DIFFERENCE™

### ADVANTAGES OF LITHIUM TECHNOLOGY

Chemical reactions of lithium silicates are more stable than those caused by volatile conventional silicates, allowing the material to penetrate and react more evenly throughout the concrete. The smaller molecular structure of lithium silicates contributes to deeper penetration for maximum hardening, sealing, and densification. Other silicates absorb moisture and cause ASR, raising the pH of the surface and weakening the substrate over time. Lithium silicates are pH neutral and insoluble, providing maximum strength and water resistance. The cutting-edge technology in our proprietary lithium formulations make SealSource® products the most advanced in the industry.

\*Please understand that these colors are the closest representation possible, however color may vary depending on the condition of the concrete being treated. Custom colors are available upon request.

### KromaKrete™ FEATURES

- UV-Stable / Light-Reflective
- Deep penetration for maximum durability and stain resistance
- Protects against abrasion and dusting
- Superior durability reduces maintenance costs and downtime
- Water-Based
- Easy to clean and maintain
- LEED® Certified for EQ Credit 4.1: Low-Emitting Materials / Adhesives & Sealants
