**Vineyard Connector Pipeline Update
CWP – North Shore Aqueduct
Construction Update – April 5, 2013**

Re-Opening of 200 South, Lindon Delayed Due to Rain

200 South at 2000 West, Lindon will not open today, April 4 as planned. Due to the heavy rain it was necessary to cancel the scheduled asphalt delivery. With the rain forecast to continue into Monday and Tuesday of next week, it is anticipated that the opening of 200 South will not take place until the middle of next week.

We appreciate your patience and understanding.

General work hours are between 7:00 a.m. and 6:00 p.m. Monday through Friday. Work hours could be extended if circumstances warrant.

Construction schedules are subject to change depending upon circumstances.

Updates on the pipeline's progress and how construction will affect the public are being provided through a public information outreach program. Additional information is available on our Help and Information line at 801-360-6528 or online at vineyardconnector.com. You can sign-up for email updates at mnstansfield@gmail.com.

About the Project

The Vineyard Connector Segment is the final segment of the North Shore Aqueduct of the Central Utah Water Conservancy District Water Development Project (CWP). It connects previously installed pipelines to complete a large culinary water transmission system from water sources to communities and agencies in northern Utah and southern Salt Lake Counties.

It will consist of the installation of approximately 32,700 feet of 60-inch welded steel pipe and 1,120 feet of 48-inch welded steel pipe within easements and rights-of-way obtained by the Central Utah Water Conservancy District and will extend from approximately 600 East and Pioneer Crossing in Lehi to 1600 North and 150 West in Vineyard.

It will also consist of replacing approximately 5,200 feet of 24-inch sewer line with a 48-inch sewer line for the Timpanogos Special Sewer District along with drains and manholes.

The Pioneer Crossing and the North and West Segments of the North Shore Aqueduct are already in place. This is the final segment to complete before water deliveries begin in 2014.
