BENTWOOD GOLF COURSE

Bentwood Golf Course is an 18 hole golf course located in the 375 acre Frazier Park on the southeast edge of Ulysses. The front nine is a parkland style course with small pushup greens that average 3500 sq. ft. The back nine features slightly larger greens built with more modern style mounding and a variety of design styles transitioning from parkland to dunes to links and finishing with a signature par three over water at the eighteenth. Bentwood has at least three sets of tees on each hole providing a set of tees to appeal to every level of golfer. Water features can come into play on 10 holes and the course features 25 sand bunkers.
ULYSSES, a city of progress, pride and possibilities.

Over the past decade the city of Ulysses has been planning and implementing the addition of nine holes at Bentwood Golf Course, updating the Frazier Park facilities, and the restoration of Frazier Park Lake. The Ulysses community is proud of the outdoor recreational opportunities this redeveloped area has brought to the city and the surrounding communities.

**FRAZIER PARK**

Bentwood Golf Course is only one feature of the multi-use environment in Frazier Park. The newly restored Frazier Lake is the central attraction of the park. Picnicking, camping, RV hookups, playgrounds, and open spaces are a part of the lakeside experience. The park features approximately four miles of hike and bike trails. Nearly a mile of the trail system is paved with concrete or asphalt and serves as the central hub for more technical and isolated single track trails that weave through the brush and woodlands areas of the park. The trails and lake provide entertainment for walkers, birders, and experienced mountain bikers alike.

**FRAZIER PARK LAKE**

Frazier Park Lake was restored to provide a water-based recreation resource for the community. It was also designed to enhance the surrounding riparian wildlife habitat and provide a dependable source of irrigation water for the golf course and local cemetery. The wastewater effluent system that supplements the lake is an innovative process that includes a series of streams, waterfalls and wetlands to filter the water. Frazier Park Lake is a welcomed resource for educational and recreational purposes to the community of Ulysses.
