

Helpful Stabilizing Information

These instructions are for self adhesive tear-a-way stabilizers on paper-backed release sheets, sometimes referred to as sticky stabilizer. I have found this stabilizing process works great for most designs. It is fast and easy.

Note: For this technique, you will need to keep the inner and outer hoops together being sure they are tight.

Step 1. Trace around the outside edge of the hoop on the glossy side of the sticky-backed stabilizer (also known as self-adhesive tear-a-way).

Cut around the traced lines.

Step 2. Peel back the stabilizer as shown.

Step 3. Turn the hoop upside down and place the sticky part of the stabilizer on the wrong side of the hoop.

Make sure the stabilizer is tight and secure.

Turn the hoop back over to the right side.

Step 4. Draw a vertical and horizontal line down the center of your fabric with a disappearing marking pen. See your specific project for marking your fabric.

Attach the hoop to the machine. Place your fabric in the center of the hoop on top of the sticky stabilizer. Place the embroidery needle in the intersection of the two lines that you just marked on your fabric. If the fabric requires adjusting, remove the fabric from the hoop and reposition it as needed.

For extra support, I like to slip a piece of light weight tear-a-way stabilizer under the hoop. You are now ready to embroider your design.
