Design Color Sequence Chart

The color sequences below are only suggestions; please feel free to select colors of your choice.

Important information-please read:

To ensure that the design will sew out correctly, it is extremely important that you read this information: different embroidery software will sometimes assign default colors to the embroidery design and will also create different numbers of color stops or changes. Sometimes the colors that the software assigns do not match the color sequences that were provided for you. This is something that is beyond my control. It is best to disregard your computer screen and work with this color sequence chart.

Please leave the color sequences in the order that was digitized for each design.

Another thing that is extremely important is to not sort the colors with your software.

I suggest sewing out a sample of the design on the fabric that will be used for your project. This way you can be sure you like the colors of thread you have chosen and become familiar with the color sequences for each design.

I used Robinson Anton 40wt -100% Rayon thread for this design in the following colors and numbers:

1. Inside Shading-Pink #2223
2. Scallop-Dusty Rose #2395
