## Lesson 36: Cross Stitch design from Embroidery design and a little more.

It's possible to take an existing embroidery design and open it in the Cross Stitch application and have a cross stitch design. The design can not be an .art file so if you want an .art design turned into cross stitch you must first open the design in Software 7 and then save it as another type of file.

Open a new page in Software 7.
Navigate to My Designs-Embroidery Software 7>Animals>WP090.
Open.
File>Save as…>My Designs-Embroidery Software 7>CSM Workbook Exercises>Bird for Cross Stitch. Save as type: <mark>Click the arrow to scroll to Deco, Brother, Babyloc (*PES)</mark>
When you select .pes as the **file type to save** as, a PES Save Options box opens.

Select Hoop: 180 x 130. It really doesn't matter which hoop you choose.

Click **OK.**

Click **Save**.
